SIMPLE RESOLUTION OF COMPLEX CESAREAN SECTION: THEORETICAL AND PRACTICAL COURSE

Masterclass by Prof Nieto-Calvache and Prof Palacios Jaraquemada
Organization Prof Martinez de Tejada, Dr De Oliveira, Dr Pellegrinelli

The incidence of pregnancies on a scarred uterus has increased in the last decades. The management of a suspected placenta accreta and of complex cesarean sections, has gained growing attention in recent years and has evolved considerably.

To share their expertise, the Obstetrics Division of the University Hospitals of Geneva invites you to a Masterclass led by two renowned, international specialists, Professor Nieto-Calvache and Professor Palacios Jaraquemada. Their groundbreaking work has greatly changed placenta accreta management, introducing a practical clinical approach that significantly reduces puerperal hysterectomy rates and morbidity. The proposed surgical approach and techniques, helps also when performing complicated C-sections.

On Tuesday, June 24th, the morning session will cover theoretical backgrounds, followed by hands-on simulation workshops in the afternoon. The day will conclude with an interactive discussion on common and complex clinical cases, allowing participants to share their experiences.

On Wednesday, June 25th (half-day), participants will have the option to register (separately) for a dissection session on fresh cadavers, providing a unique opportunity to practice the techniques presented the day before.

The two proposed courses are designed for experienced obstetricians-gynecologists. Residents with at least 4 years of training can also attend the courses. The courses will be conducted in English and will be highly interactive, featuring extensive simulation opportunities.

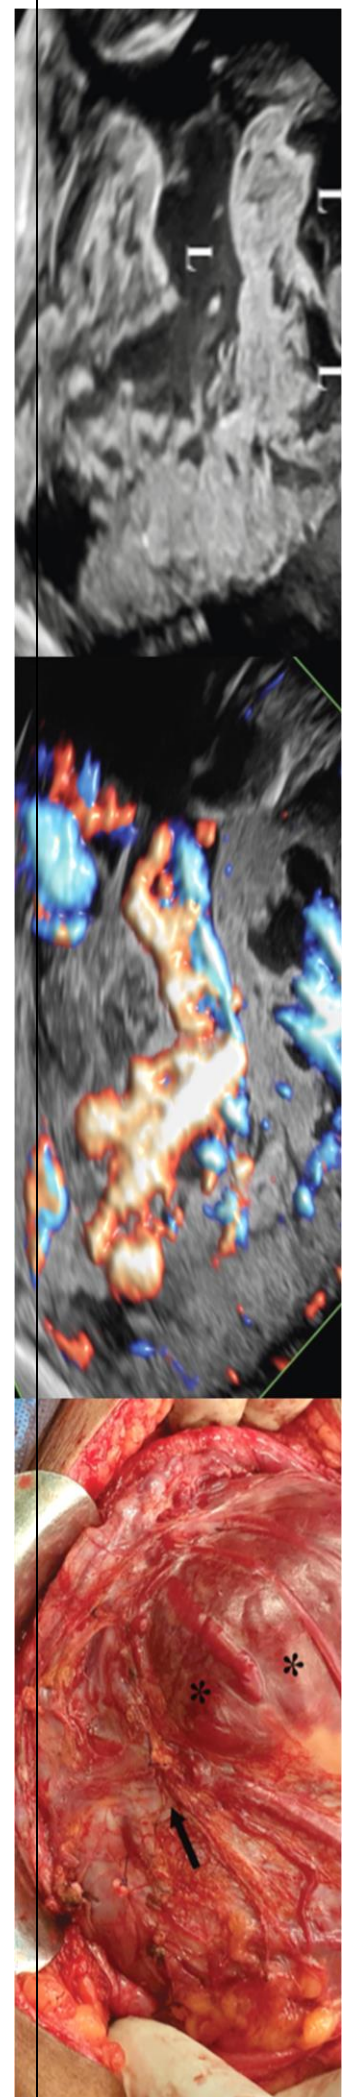

Accueil le 25 juin : Maison de l'enfance et de l'adolescence – 26 bd de la cluse – 1205 Genève

External participants Tuesday 24th : 500 CHF / Wednesday 25th : 200 CHF

HUG employees Tuesday 24th : 100 CHF / Wednesday 25th : 50 CHF

SSGG Fortbildungcredits: pending / Crédits de formation SSGO: Tuesday : 8 credits / Wednesday : 4 credits

General Objectives:

Update theoretical content focused on simple surgical procedures of recognized efficacy.

Practical learning of reproducible skills in clinical-surgical practice.

Specific Objectives. At the end of the course participants should be able to:

Describe the areas and vascular pedicles of the female genital system.

Represent the pelvic spaces and their safe surgical access.

Describe and perform hemostasis of the lower uterine segment.

Repair the dehiscence uterine segment. Describe and perform internal aortic compression.

Describe the ultrasound signs of placenta accreta and other conditions of a complex cesarean section (uterine dehiscence, placenta previa, etc.).

Describe and simulate therapeutic options for placenta accreta.

Describe and simulate a hemostatic procedure for different uterine segments.

Plan and perform a complex cesarean section.

MASTERCLASS Tuesday 24th June 2025 MORNING SESSION

8:00-8:20	Registration
8:20-8:40	Welcome and Opening
8:40-9:05	Protocolized management of complex cesarean section (safe access to the pelvis, bladder mobilization, selection of bleeding control strategy according to topography)
9:10-9:35	Pelvic irrigation and importance for the selection of vascular control strategy
9:40-10:05	Primary and secondary hemostasis in postpartum hemorrhage during cesarean section
10:05-10:35	Break and Refreshments
10:40-11:05	Ultrasound evaluation for high risk of PAS patients, ultrasound staging
11:10-11:45	Intraoperative Staging and Topographic Classification of PAS
11:50-12:15	How to Decide the Most Convenient Approach and Technique in PAS
12:15-12:30	Discussion, Contributions, Controversy

MASTERCLASS Tuesday 24th June 2025 AFTERNOON SESSION

Four simulation stations: surgical techniques useful in managing hemorrhage using low-fidelity simulators.

Review of Interactive Clinical Cases.

13:30 – 14:00	Uterine conservation in placenta accreta
14:05 – 14:35	Hemostasis of the upper uterine segment (body) and lower uterine segment
14:40 -15:10	Modified subtotal hysterectomy (placenta accreta with vesicouterine fibrosis)
15:15- 15:45	Manual compression of the aorta
15:45 -16:15	Break and Refreshments
16:15 – 17:15	Review of Interactive Clinical Cases: videos of patients undergoing complex obstetric procedures.
17:15 -17:30	Discussion and closing

DISSECTION ON FRESH CADAVERS Wednesday 25th June 2025

8:00-8:15	Registration
8:15-11:45	Visualization and recognition of the structures Identification and opening of pelvic spaces. Mechanisms of complications
	Pelvic ureter and bladder: high dissection (iliac) and low (pericervical) identification landmarks . Prevesical space: abdominal repair of extended upper vaginal tears. Transvaginal compression of uterine arteries
12:00 -13:00	Review of Interactive Clinical Cases: videos of patients undergoing complex obstetric procedures.
13:00-13:15	Discussion and closing
